# SPOTLIGHT ON:

Super Tramp Trampoline Park, Plymouth UK

In February 2019, Super Tramp became the first trampoline park to install **WallRider** – an interactive target game for Walk-the-Wall installations. We followed up with **Manager, Nathan Stanley**, to find out how WallRider has taken their park to new heights.

## A snapshot of Super Tramp:

Super Tramp is a trampoline park in Plymouth providing bouncing sessions for families, schools, teens and parties. The park already has Rugged Interactive's **CardioWall FreeStyle Duo** and is always looking for new features and products to excite visitors and keep them coming back.

## Why did Super Tramp choose WallRider?

Walk-the-Wall was already a popular feature at Super Tramp, but Nathan felt that an injection of tech could turn this into the **South West's number one wall running setup**.

Interactive targets, lights and sound all add a new element of excitement for users and spectators. WallRider gives users a score, so it was a perfect chance to introduce **leaderboards and competitions** to the park.

## Feedback on WallRider:

WallRider takes urban trampolining to the next level. As soon as it was installed, visitors got **competitive** and it attracted a **whole new user group** to the park.

WallRider has been a great way of **introducing wall-walking to beginners** as they use the light-up targets to help place their feet. For expert users, it's **developed new skills** including bounce control, foot accuracy and agility.

Super Tramp now runs **WallRider clubs** and weekly competitions for both beginner and expert wall-walkers. It's given that area a new lease of life!

## What they had to say:

*"It's the most popular feature in the park! It's brilliant for teaching progression and as a general teaching aid. Plus, it really develops high level skills for our best players"*

**Nathan Stanley, Park Manager**
